

Introduction

The purpose of the project is to find out, of all the manufacturing industries which industry generates maximum amount of revenue and plot the top five revenue generators in the bar graph.

Materials/Methods

The python library Beautiful Soup was used to scrape the Wikipedia data from the web and matplotlib was used to plot the bar graph.

Results

Conclusion

If we observe our bar chart Automotive Industry is the clear winner that generates maximum amount of revenue out of all industries, then comes the Aerospace & Defense Industry. There isn't much difference among the rest of three industries in terms of revenue generation. From the results it is obvious that the Automotive Industry involves a lot of amount around it as compared to remaining top5 manufacturing industries.

Resources Used

- Wikipedia for data source.
- Beautiful Soup and Matplotlib for generating results.
